Full-Stack Development

Front-End Development

Suga Priya Kumaresan

Associate Software Engineer @vlinder.io | Full Stack Developer | Freelancer

Thoothukudi, Tamil Nadu, India

Summary

In August 2022, I made my internship debut, and in July 2023, I moved into a full-time position. I have valuably contributed to the growth of 3 projects (Trag, Tribe, GEMS, E-ticketing) totaling more than 10 applications over my time there. I am skilled in TypeScript, JavaScript, React, and React Native. I am most interested in utilizing REST and GraphQL to integrate features. I recognized a new challenge by joining the Backend team. I've been actively studying and utilizing technologies like Node.js, Nest.js and MongoDB. My skill set has grown as a result of this move, and I am aiming to become versatile full-stack engineer with knowledge of both frontend and backend technologies.
