YouID

Identity verification on any device

YouID is a solution that allows businesses to verify users' identity using a personal identity document, face verification between a live picture and the identity document, and anti-fraud checks.

10K+ documents from 200+ countries and territories
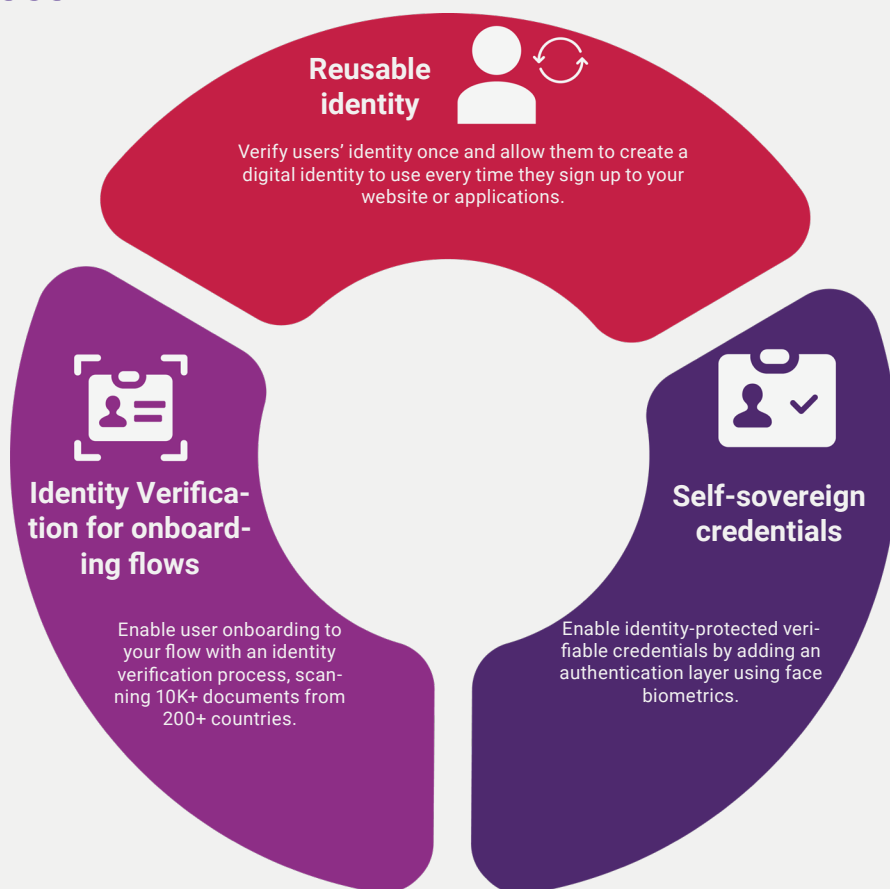

ISO 30107 certified anti-spoofing technology

Reduced cost without compromising security

Verify users' identity with YouID

- ✓ Robust registration mechanism that verifies users' identity through face verification between a live picture and the identity document.

- ✓ With anti-spoofing/liveness checks to detect a real user performing the registration.

- ✓ Automates all aspects of document OCR and validation and face biometric verification.

- ✓ It can be integrated virtually in any programming language, in any environment.

- ✓ Developer-friendly design.

Youverse

Use Cases

Reusable identity

Verify users' identity once and allow them to create a digital identity to use every time they sign up to your website or applications.

Identity Verification for onboarding flows

Enable user onboarding to your flow with an identity verification process, scanning 10K+ documents from 200+ countries.

Self-sovereign credentials

Enable identity-protected verifiable credentials by adding an authentication layer using face biometrics.

Why Youverse?

User-friendly

Top-tier algorithm

Easy to deploy

Compatible with enterprise systems

Decentralized storage of biometric template

PSD2 SCA compliant

Compliant with data privacy laws

Youverse simplifies all customer interactions with private, convenient, and secure face authentication on any device. With a certified top-tier algorithm, Youverse enables private and secure authentication and identity verification experiences, with unprecedented levels of convenience and accuracy.
