- 42:22 like a multi-tenanted um solution you know we give different options for people that want different levels of
- 42:28 control as well so maybe you want a dedicated instance in the public Cloud environment so we can do that or we can
- 42:34 support um use cases like bring your own key and hold your own key again that
- 42:39 give uh those organizations more control as well over their data and who might
- 42:45 potentially have access to it that's fascinating stuff um what I also wanted

English (auto-generated)
